

Amendments to the Abstract

Amend the Abstract as follows:

A manufacturing system for printed wiring boards ~~of this invention~~ divides printed wiring boards scheduled to be manufactured ~~[[to]]~~ into non-fractional and fractional groups depending on ~~[[a]]~~ the content of an order remainder list. The printed wiring boards ~~divided to the~~ categorized as non-fractional are panelized ~~according to~~ having the same shapes while the printed wiring boards ~~divided to the~~ categorized as fractional are grouped corresponding to manufacturing conditions thereof. Then, each group of the printed wiring boards are panelized ~~(pairing) according to~~ with different shapes in a predetermined manufacturing block. Consequently, the generation of incidental products or the waste of material can be prevented.
